# ABOUT US

HUB Pipe & Fitting was established in 2004 and can look back on a success story of over 20 years full of stability, reliability and growth. From trading to Manufacturing-Trader-Stockiest value-added steel products

we have occupied a significant position in importing, storing and supplying long steel in India. Accepting challenges and ensuring customer satisfaction has been the hallmark of our group. Over the past 20 years, the Group has grown into a multi-product, multi-location company providing comprehensive plumbing solutions to a range of industries.

# OUR GOALS

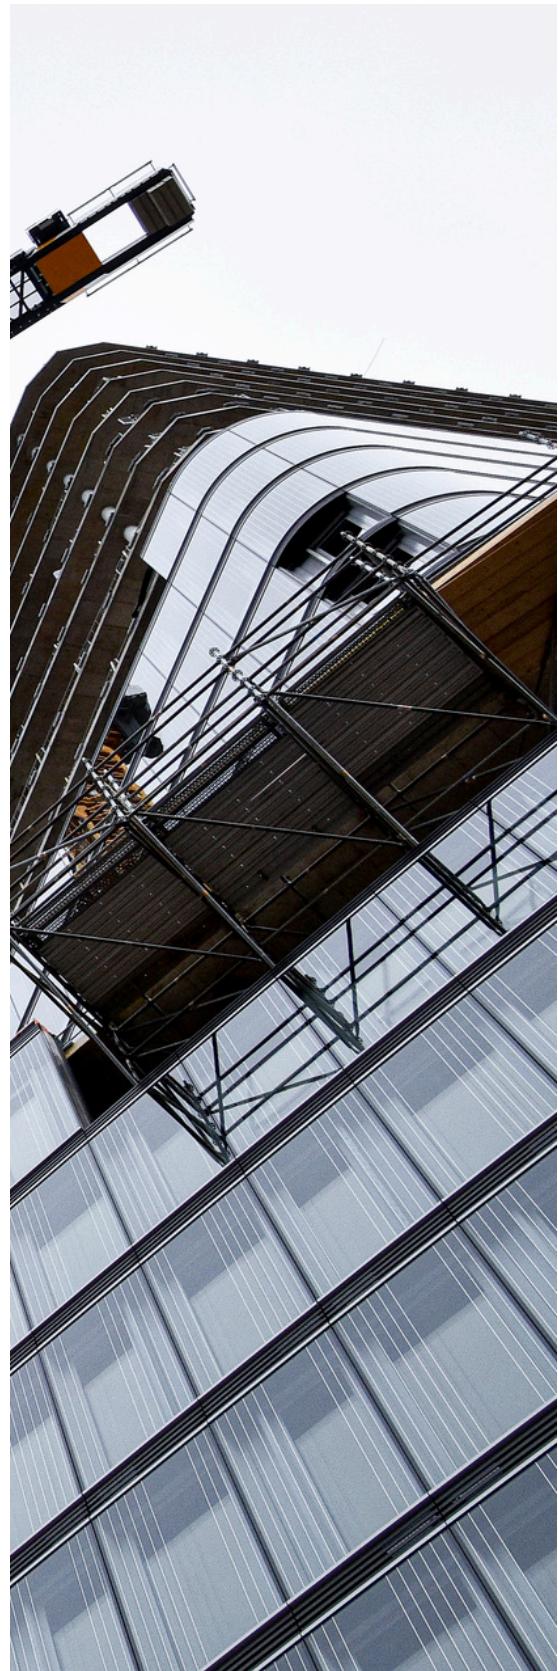

## High Quality

Products manufactured to the highest industry standards.

## Cost-Effective Solutions

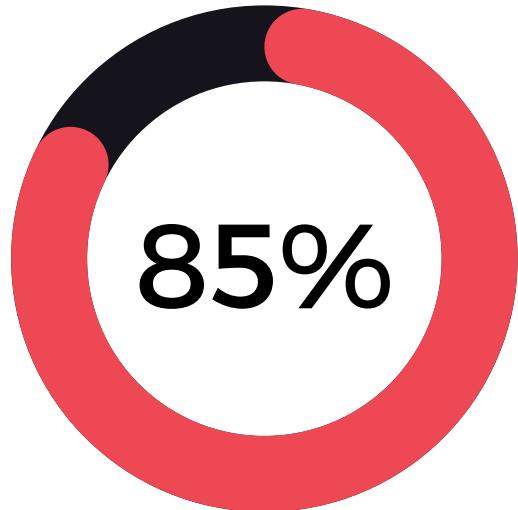

Competitive pricing without compromising on quality.

# OUR PRODUCT

At HUB Pipe & Fitting, we pride ourselves on our dedication to quality, innovation, and customer satisfaction.

HUB Pipe & Fitting, your premier destination for high-quality industrial piping solutions. Established with a commitment to excellence,

HUB Pipe & Fitting is a leading manufacturer specializing in a comprehensive range of products designed to meet the demands of various industries.

## PLATES

Steel plates are flat, thick pieces of steel used in various construction and manufacturing applications. They come in different grades and thicknesses, tailored to meet specific strength, durability, and resistance requirements.

## FLANGES

A flange is a mechanical component used to connect pipes, valves, pumps, and other equipment in piping systems. They are commonly used in industries such as oil and gas, petrochemical, water treatment, and power generation.

## OLETS

Olets are a type of pipe fitting used in piping systems to branch off a pipeline. They are designed to allow for the creation of a branch line from a main pipeline, providing a means to connect different pipe sizes or to divert flow.

## SOCKET WELD

Socket weld is a method of connecting pipes and fittings by inserting the pipe into a recessed area of the fitting and then welding around the joint. This technique is commonly used for small-diameter piping, typically 2 inches or smaller.

## BUTTWELD FITTINGS

Buttweld fittings are critical components used in piping systems to join sections of pipes or change the direction of flow. These fittings are welded onto the pipe ends, creating a continuous and smooth flow path.

## BARS

bars, often referred to as reinforcing bars or rebar, are critical components in the construction industry. They are used to reinforce concrete structures, providing tensile strength and flexibility. Typically made from carbon steel, they come in various diameters and lengths.
